An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

At page 1, line 2 of the specification insert:

--This application is a 371 of PCT/EP03/03587, filed 07 April 2003.--

At page 5, line 16, of the specification insert:

--Brief Description of the Drawing

Figure 1 is a thickening rheogram of the product of example 2--.

The following is an examiner's statement of reasons for allowance: The prior art of record fails to teach or suggest the improved results obtained with the particular rice starch components of the instant claims. JP 2001-164213 comprises the closest prior art. While the reference teaches away from adhesives lacking rice starch in the carrier phase, as required by the instant claims, it does exemplify a Stein-Hall adhesive comprising an all corn starch carrier and a 20% rice starch 80% corn starch main phase. Table 5 sets forth the formulation details of the different mixtures compared in Table 4, exemplifying the preferred embodiment. The reference **does not** disclose the amylose and amylopectin proportions of the rice starch used and does not provide any indication of the manner in which one of ordinary skill in the art would select a rice starch based thereon. The instant application provides clear and convincing evidence that the proportions of amylose and amylopectin in the rice starch recited by the instant claims are critical to achieving the short heating time and high thickening speed characteristic of the instant invention. See pages 15 and 17 of the specification.
